

**You too can have a
"BEE friendly" lawn**

Lethal Lawns

Pesticides, chemicals and fertilizers, used on lawns today, with grass as its only plant . . .

- **Kill clover, earthworms, topsoil, birds, butterflies and native and honey bees**
- **Poison groundwater, drinking water, lakes, rivers and streams**
- **Create dead zones where plants and fish are unable to live**
- **Create food desserts for earthworms and pollinators**
- **Place pets, homes and people at risk**
- **Have been linked to cancers**
- **Need a lot of water**

Original Lawns

Years ago, before chemicals on lawns were being used, Dutch white clover was purposely placed in seed mixes for lawns and provided the following . . .

- **Food for earthworms, birds, butterflies and bees**
- **Aeration and creation of topsoil**
- **Lawns that stayed green where children and pets could play safely**

**Information gleaned from
White Clover for Honey Bees, by Grandma Jo**
